

**04/05/05 - Thames Water new regulations**

At the AGM, Deric advised that Thames Water had new regulations which required all water tanks to be situated at least 2 metres from the standpipe taps. These taps were to be threaded (which they are) and all hoses need to be used with a trigger action device which stops back flow.

A working party to move tanks will convene on Sunday 17th April at 10am. Please help if you can!
